

# Major Features

## CG Cloud Support

Integrate with [Salesforce CG Cloud](#) solution to apply complex order-taking logic to its objects.

- Use the [Salesforce Product](#) object in bundles, catalogs, and promotions.
- Create orders for the [Retail Store](#) object.
- Use [dynamic groups](#) to keep stores and sales products up-to-date.

## Discount Management

Fully configurable [Pricing Procedure](#) that allows you to implement complex custom scenarios with manual and total discounts if needed:

- Set [Pricing Procedure Steps](#) to write the intermediate discount results.
- Add [step conditions](#) to determine the step applicability.
- Implement [SDK step](#) to use custom project logic.

The standard Pricing Procedure version 1 is also supported. Use either the standard v.1 syntax or customize the new pricing procedure using the steps with a broadened [syntax](#).

Enhanced [discount calculation](#) capabilities:

- Define [quantity settings](#) for discount calculation on Calculation Type.
- Set [Exception conditions](#) to apply the discount under specific circumstances.
- Specify any field on any object to be used as a [discount rate source](#).
- Launch [full or partial recalculation](#) in the order cart if the selected field value is altered.

## Freebies

- Take advantage of full and partial [recalculation and auto-update](#) of freebies in order triggered by changes in the set of products in the cart.
- Control the [freebie distribution](#) among several deliveries.
- Use freebies [Multiplier](#) to control the quantity of freebies in the cart based on the set value.

## Limit Rules

Dynamic control over the product quantity and cost for the whole order or several deliveries:

- Apply [limit rules](#) to all products in the order, or only for those that match conditions.
- Apply limit rules to a single delivery or [a group of deliveries](#) in the order.
- Set conditions to [exclude limit rules application](#) in specific cases, if necessary.
- Check the real-time validation during the order creation.

## SDK

With [the new setting](#), tailor the order-taking process according to your goals and facilitate the audit purposes:

- [Display custom price tags](#) in the order basket.
- [Update custom fields](#) when adding products to order.
- Display the [info icon](#) with an embedded HTML template.

## Other improvements

- Support for [the standard Salesforce validations](#) to control conditions applied during the order creation.
- [Editable fields](#) in order that allow entering data in custom fields in real-time.
- Decreased processing time when adding many products from catalogs and promotions.
- Real-time update of search results in catalogs. Highlighting applied filters and the ability to clear all filters.
- Web-service Improvements, including possibility to [turn off closed orders duplications](#).
